

INVESTOR PITCH DECK V1.0

KRONIKU

The Memory Operating System

Building humanity's external memory. Kroniku silently captures, fuses, and structures life signals into a conversational second brain.

THE PROBLEM

Human Life Produces More Data Than Brains Can Retain

Modern life generates thousands of digital footprints daily, but they remain completely fragmented.

Siloed Digital Data

Google Maps knows where you drove.
Photos knows what you saw. Calendar knows plans. Bank knows purchases.
None of them understand your life.

The Human Integration Burden

Humans are forced to act as the manual integration layer between 10+ disjointed apps just to recall past events and decisions.

High Cognitive Overhead

Existing solutions (notes apps, diaries) require high-effort manual entry. People don't forget because they are careless—they forget because manual journaling fails.

Don't Record Life. Let Kroniku Observe It.

Moving from high-friction manual entry to zero-effort passive memory capture.

Old Way: Manual Silos

- Open note-taking app to record meeting context
- Manually search maps for location addresses
- Scroll through thousands of unlinked photos
- High drop-off rate within 14 days of app installation

Kroniku Way: Passive Memory OS

- Zero manual entry required; background signal sensor
- Automatic spatial-temporal clustering & event linking
- Natural language conversation search ("Where did I meet Mr. Deji?")
- Indefinite retention & instant contextual recall

One Unified Timeline Reconstructs Your Day

Kroniku transforms raw device signals into a seamless story of your life.

7:42 AM - Commute

Left home • Traffic heavy due to rain • Driving to Victoria Island

9:00 AM - Stop

Coffee at Café Neo • 31°C Sunny

10:00 AM - Meeting

Quarterly Review with Mr. Deji • Contract discussed • Voice note recorded

1:15 PM - Expense & Fuel

TotalEnergies Fuel Stop • \$45.00

Memory Replay & Narrator

"On July 17, you left home at 7:42 AM amidst heavy rain. After grabbing coffee at Café Neo, you arrived at Victoria Island for your Quarterly Review with Mr. Deji. You discussed the acquisition contract and recorded a 2-minute voice note..."

Conversational Search: "Where did I meet Mr. Deji about the contract?" →
Answer: Victoria Island, July 17.

The Memory Graph Engine

Combining native mobile sensor processing with a high-dimensional Knowledge Graph.

1. Native Sensor Core

Built natively in Swift (iOS) and Kotlin (Android). Low-power background tracking via CarPlay, HealthKit, Core Location, and Activity Recognition.

2. Knowledge Graph & RAG

Stores memories as semantic edges (Person → Location → Document → Expense). Hybrid Vector + Graph Search resolves complex queries instantly.

3. Lazy AI Pipeline

LLMs are invoked strictly on demand during retrieval/replay synthesis. Keeps compute cost low while delivering superior intelligence.

BUSINESS MODEL

Freemium Consumer + Enterprise Field Intelligence

Monetizing across individuals, executives, and mobile business fleets.

Kroniku Free

\$0

- Automatic timeline
- 30-day memory window
- Local device search
- Basic voice capture

Kroniku Pro

\$12.99 / mo

- Unlimited historical memory
- AI Conversational Search
- Memory Replay Narrator
- Document & Travel parsing

Kroniku Business

\$35 / seat / mo

- Team organizational memory
- Customer visit logs & CRM link
- Fleet intelligence
- Compliance logging

The Driving Hook: Trojan Horse to Mass Adoption

Capturing immediate high-friction utility before expanding into whole-life memory.

Phase 1: Driving & Telematics Hook

Start with driving, mileage, and vehicle expenses. Drivers urgently need effortless logbooks for business deductions and fleet tracking. CarPlay & Android Auto integration provides instant friction-free utility.

Phase 2: Total Life Expansion

Once users trust Kroniku with location & driving, the system seamlessly ingests Health, Photos, Calendar, and Documents, converting driving tracking into an indispensable personal Memory Operating System.

PERSONAL KNOWLEDGE MARKET

1.2B

ACTIVE COMMUTERS GLOBALLY

85%

TARGET GROSS MARGIN

Seed Round & 24-Month Execution

Positioning Kroniku to become the category-defining Memory OS.

\$2.5M Seed Funding Target

- **50% Engineering:** Native Swift/Kotlin development, edge AI models & Graph DB infrastructure.
- **30% Product & Design:** Fluid UI/UX, Memory Replay voice synthesis.
- **20% Marketing & Acquisition:** Telematics & driver community GTM playbook.

Key Operational Milestones

- **M6:** iOS/Android Beta with CarPlay Driving Telematics.
- **M12:** Pro Tier launch; 50k MAU, 5k Paid Subscribers.
- **M24:** Business Tier rollout & CRM integrations; \$3M ARR.

Kroniku: Your Life. Remembered.
